Using **Skin Seal in a delivery device** (instead of an ampoule or dropper) offers **significant clinical and practical advantages** for both healthcare providers and patients. Here's a clear comparison and the **key benefits**:

Benefits of Skin Seal in a Delivery Device

1. Precise & Controlled Application

- **Delivery device** allows direct application with a consistent flow.
- Prevents **overuse or underuse** of the adhesive.
- Reduces **wastage**, especially critical with small-volume products like 0.25 ml.

2. Improved Sterility & Hygiene

- Single-use delivery device minimizes contamination risk.
- Ampoules or droppers may **require handling, breaking, or transferring**, increasing infection risk.

3. Ease of Use for Doctors & Nurses

- **Ready-to-use** format saves time during surgeries or emergency care.
- No need for scissors, blades, or tools to break an ampoule.
- Can be used **single-handedly**, especially beneficial in the OR or wound care clinics.

4. Better Wound Edge Approximation

- The applicator tip allows **targeted, linear application** along wound edges.
- Enhances cosmetic outcomes and closure integrity.

5. Reduced Risk of Adhesive Spillage

- Ampoules or droppers can lead to adhesive spilling on gloves, instruments, or drapes.
- Delivery devices **localize the flow** to where it is needed.

6. Consistency in Application

- Every unit delivers the **same volume, direction, and spread**.
- Useful for training, standard operating procedures (SOPs), and multi-user settings.

7. Professional Presentation & Acceptance

- Delivery devices look more **modern and premium**, increasing confidence among surgeons and patients.

- Helpful in gaining approvals in **hospital tenders, government supply, and private practice**.

🔬 Clinical & Market Perspective

Format	Limitations	Skin Seal Delivery Device – Advantages
Ampoule	Risk of breakage, spillage, variability	Controlled, no breakage, hygienic
Dropper bottle	Inconsistent drops, contamination risk	Direct, uniform line of application
Delivery Device	—	**All-in-one, sterile, user-friendly**

🎁 Ideal Use Cases for Skin Seal Delivery Device

- **Surgical wound closure (laparoscopy, plastics, ortho)**
- **Emergency departments**
- **Rural or field hospitals** where sterility and speed matter
- **High-volume settings** like OT rooms or wound care clinics
